Short title describing the paper

and a slightly longer subtitle to go with it

Author1 * Author2 †

September 11, 2018

Hello, here is some text without a meaning. This text should show what a printed text will look like at this place. If you read this text, you will get no information. Really? Is there no information? Is there a difference between this text and some nonsense like "Huardest gefburn"? Kjift – not at all! A blind text like this gives you information about the selected font, how the letters are written and an impression of the look. This text should contain all letters of the alphabet and it should be written in of the original language. There is no need for special content, but the length of words should match the language.

*This is the email and workplace of author1

0.1. Also here is some code

```
import numpy as np
from sklearn.ensemble import RandomForestClassifier

def my_model(X, y):
    model = RandomForestClassifier()
    return model.fit(X,y)

print("What a cool code highlighting feature")
```

1. The first section

1.1. Example text and equations

Example quote Bierlaire, 2006. Hello, here is some text without a meaning. This text should show what a printed text will look like at this place. If you read this text, you will get no information. Really? Is there no information? Is there a difference between this text and some nonsense like “Huardest gefburn”? Kjift – not at all! A blind text like this gives you information about the selected font, how the letters are written and an impression of the look. This text should contain all letters of the alphabet and it should be written in of the original language. There is no need for special content, but the length of words should match the language.

$$y = ax + b \tag{1.1}$$

Hello, here is some text without a meaning. This text should show what a printed text will look like at this place. If you read this text, you will get no information. Really? Is there no information? Is there a difference between this text and some nonsense like "Huardest gefburn"? Kjift – not at all! A blind text like this gives you information about the selected font, how the letters are written and an impression of the look. This text should contain all letters of the alphabet and it should be written in of the original language. There is no need for special content, but the length of words should match the language. .

$$G(x) = \sum_{m} \left(\sum_{j \in C} \alpha_{jm} x_j^{\mu_m} \right)^{\frac{\mu}{\mu_m}} \tag{1.2}$$

1.1.1. Figures and tables

I suggest you put figure captions below figures and table captions above tables. But really you decide.

2. The second section

2.1. Second subsection below here

Hello, here is some text without a meaning. This text should show what a printed text will look like at this place. If you read this text, you will get no information. Really? Is there no information? Is there a difference between this text and some nonsense like "Huardest gefburn"? Kjift – not at all! A blind text like this gives you information about the selected font, how the letters are written and an impression of the look. This text should contain all letters of the alphabet and it should be written in of the original language. There is no need for special content, but the length of words should match the language.

$$y = b \cdot x^a \tag{2.1}$$

This equationnumbering also work with align environments

$$y = 3x + 2x \tag{2.2}$$
$$= 5x \tag{2.3}$$
